

Install Jenkins Server on Ubuntu 18.04

Table of Contents

Prerequisite	1
Installation	1

Prerequisite

- JDK-8

Installation

- Update Jenkins key cache.

```
$ wget -q -O - https://pkg.jenkins.io/debian/jenkins.io.key | sudo apt-key add -
```

- Add Repository.

```
$ sudo sh -c 'echo deb https://pkg.jenkins.io/debian-stable binary/ > /etc/apt/sources.list.d/jenkins.list'
```

- Update package

```
$ sudo apt-get update
```

- Install Jenkins server

```
$ sudo apt-get install jenkins
```

This package installation will:

- Setup Jenkins as a daemon launched on start. See `/etc/init.d/jenkins` for more details.
- Create a `jenkins` user to run this service.
- Direct console log output to the file `/var/log/jenkins/jenkins.log`. Check this file if you are troubleshooting Jenkins.
- Populate `/etc/default/jenkins` with configuration parameters for the launch, e.g `JENKINS_HOME`

- Set Jenkins to listen on port **8080**. Access this port with your browser to start configuration.

If your `/etc/init.d/jenkins` file fails to start Jenkins, edit the `/etc/default/jenkins` to replace the line `----HTTP_PORT=8080----` with `----HTTP_PORT=8081----` Here, "8081" was chosen but you can put another port available.

- While configuring on UI select **Install recommended plugins**.

Configure Email Notification using Gmail.

- Go to Manager Jenkins -> Configure System.
- Goto Extending Email Notification section. Fill details as shown in below screenshot with your email address. SMTP Server is **smtp.gmail.com**, select advanced option and set username and password(password should be your app code) set **USE SSL** with Port **465**

Extended E-mail Notification

SMTP server:

Default user E-mail suffix:

☒ Use SMTP Authentication

User Name:

Password:

Advanced Email Properties:

Use SSL: ☒

SMTP port:

Charset:

Additional accounts:

Default Content Type:

☐ Use List-ID E-mail Header

☐ Add 'Precedence: bulk' E-mail Header

Default Recipients:

Reply To List:

Emergency reroute:

Allowed Domains:

Excluded Recipients:

Default Subject:

- Goto E-mail Notification section. Fill details as shown in below screenshot with your email address. SMTP Server is **smtp.gmail.com**, select advanced option and set username and password(password should be your app code) set **USE SSL** with Port **465**
